Dalziel and Scullion, *Tumadh: Immersion*

Dovecot Studios, Edinburgh, August 1 – September 13, 2014

Dovecot Studios in Edinburgh and An Lanntair in Stornoway on the Isle of Lewis (July 5 – August 30, 2014)

Nina J. Morris

Nina J. Morris is a Lecturer in Human Geography at the University of Edinburgh. Her interests include installation art and sculpture, landscape theory, sensory perception, and human-nature relationships.

N.Morris@ed.ac.uk

Dundee-based artists Dalziel and Scullion’s art practice explores the complex and oftentimes fraught relationship between humans and the natural world. Concerned by the increasing dislocation of people from the natural world and the future legacy for both, their work raises questions about the knowledge required to facilitate a “shift in human values and behaviours and [...] where this knowledge resides.”¹ Inspired by philosopher David Abram, journalist Richard Louv, and other environmental/ecological artists such as Giuseppe Penone and Olafur Eliasson, Dalziel and Scullion advocate the need to pay closer attention to sensory experience for therein, they argue, lays the key to an alignment with the larger ecology (Abram 1997; Little 2014). For Dalziel and Scullion, to be “sensually aware is to be engaged and so to lose
the distinction between self and other, between nature and human nature. Perception thus defined, is a form of attention, or tending to, and implies relationship and so responsibility” (Little 2014: 237). Through their they aim to “challenge the perspective of the audience, allowing them to feel and experience landscape differently, perhaps even place alternative values on the environmental aspects they encounter in their own day-to-day lives” (Aesthetica.blog 2014).

Part of the Scotland-wide GENERATION (2014) exhibition program, Dalziel and Scullion’s Tumadh: Immersion was a dual-site installation incorporating three-dimensional works, film, and photography. Together, the two parts of the exhibition worked as a “coherent and related whole” creating a dialogue between island and city but also independently prompting people to reconsider their surrounding environment (Dovecot Studios 2014). This review focuses on the five works exhibited at the Dovecot site, a refurbished former public baths which now houses the 100 year old Dovecot tapestry workshop and gallery space. The South Gallery featured a set of related installations: garments fashioned from Harris Tweed styled on the outdoor clothing one would normally don when preparing for outdoor recreation; a film of the garments
being worn on location outdoors in Scotland which illustrated their functional qualities; and, a sculptural Victorian walking dress, the hyper-extended craggy train of which cut across the space like the bulk of a glacier. In the North Gallery, one found eight illuminated photographs of Hebridean skyscapes or “slices of sky”; and, “a steel drawing of a fractal, cliff-like form” (Dovecot Studios 2014) on which were displayed seven delicately-striated three-billion-year-old Lewisian gneiss boulders. On the walls of each gallery quotes from Abram’s Becoming Animal (2011) provided further stimulus.

The overriding message of Tumadh: Immersion was “slow down and pay more attention,” a theme continued from the duo’s previous work Rosnes Benches (2014) in Dumfries and Galloway, Scotland, a series of low ergonomic platforms or ‘sockets’ which enable users to “tune into the frequencies of their surroundings” (Rosnes Bench n.d.). For Dalziel and Scullion “real immersion in nature requires active concentration and involvement”; only through attentive and continuous perception will humans develop the sensory acuity that will help them understand more fully their connection with the natural world (Dovecot Studios 2014; Friesen 2005). In Tumadh: Immersion, each of the conceptual “immersion garments” suggested different ways in which individuals could create opportunities for themselves to become absorbed in and by the natural world on an everyday basis. For example, the neoprene padded back of the Recumbent jacket (the mobile equivalent of the Rosnes benches) allowed wearers to lay comfortably supine wherever they chose an act that enabled the senses of smell and hearing come to the fore (Aesthetica.blog 2014); the Rain cape’s rubber collar exposed the wearer’s head to the conditions of the surroundings, thus enabling one to feel rain on the face, an
experience most would normally try to avoid (Palenske 2014); the Gatherer coat’s pockets and backpack enabled wearers to collect specimens for later study; and the hood of the Silhouette anorak, when pulled over the head, allowed wearers to mimic the shape of an erratic boulder to hide their human profile and enabling the observation of fauna undetected.

Aiming to counteract the “deadening of the senses in everyday life,” the exhibition encouraged people to be proactive in taking a “renewed sensory engagement with the ‘vibrant matter’ of which we are made and in which we are embedded” (Little 2014: 238). Often this will involve seeking a fresh perspective (Friesen 2005) on that which might be ordinarily ignored. Take the sky, for example, humans must tilt their heads to view it fully, but a simple repositioning of the body will facilitate the contemplation of varying cloud formations. Paying attention to multi-sensory detail, Dalziel and Scullion argue, is fundamental to the shift in values that must accompany future collaboration with non-human agents (Little 2014). As Abram explains, “when we really awake to the life of our senses […] we discover that nothing in the world around us is directly experienced as a passive or inanimate object – each thing has its
own secrets and experience.” If matter is spoken of as “essentially inanimate or inert, [it] establish[es] the need for a graded hierarchy of beings [and as such] continually isolate[s] human awareness above and apart from the sensuous world rather than in the midst of a living web (1997: n.p.). As Louise Scullion points out, “every stone has an amazing geological story, yet [to most people] it’s just a boulder” (ArtinScotlandTV 2014). It is only when human’s role as “dominant shapers of the landscape” (a role that once belonged to the glaciers) is acknowledged, and other forms of agency in the natural world recognized, will society be able to move forwards towards a truly sustainable co-dependent future.

3 *Tumadh* is the Gaelic translation of “immersion.”

4 The tweed clothing was designed by Dalziel and Scullion but crafted by seamstress Tracey Stewart Thompson. The soundtrack to the film was composed by folk musician Aidan O’Rourke.

5 Unless otherwise attributed, all quotes by the artists are from an interview with the author on June 12, 2014.

6 This was the only element shared by both exhibitions. However, in Stornoway the boulders were 345 million-year-old red sandstone from the mainland.
