The Museum as a Memory Institution

Jason Rutter, Cristina Alexandru, Elaine Niven, Maria Wolters & Robert Logie

Department of Psychology, The University of Edinburgh

Overview

This sociological aspect of the ForgetIT project seeks to develop a conceptual framework for organizational memory. Based on interviews with curatorial and management staff in a national museum the research attempts to identify the range of memory and forgetting practices within the museum. An attempt is made to develop a taxonomy which can be tested with other organisations with the intention to explore the theoretical and practical value in using human memory as a metaphor for understanding organisational memory.

Problem

For an organisation key issues for managing organisational memory and forgetting include:

- Integrating key organisational memory across systems;
- Enabling shared processes for encoding and retrieving organisational memory;
- Developing a framework for managing staff’s tacit knowledge;
- Reflexively developing a strategy for what knowledge should be preserved or forgotten;
- Supporting change while preserving key organisational memory;

Organisational Memory

Research on organisational memory has largely taken a functional approach (D’Aderio, 2001; Feldman & Feldman, 2006; Spender, 1993, 1996, 1998). Memory is seen as:

- Data and information which is be stored in systems or individuals;
- A resource in need of management;
- A tool to support efficiency and streamline business activities;
- Supporting the firm as a system for generating revenue.

However, memory is not simply a process of storage and retrieval of veridical data but rather the synthesis of different sources of information. (Loftus & Palmer, 1974) We are interested in shared and negotiated processes of organisational memory, seeing memory work as practice and routines. Organisational memory is ‘irreducibly embedded in a collective practice that underlies even individual knowledge and action’ (Hecher, 2012).

Organisational Forgetting

Managed forgetting has the potential to support dynamic change. Knowledge of the past can become problematic from an organisational perspective when it:

- Presents a barrier to adopting new knowledge
- Supports outdated practices
- Is used to develop future strategies based on information which has been superseded
- Reinforces unproductive boundaries across teams and within an organisation
- Encourages the rejection of innovation and innovative practices

References

Organisational memory: ‘stored information from an organization’s history that can be brought to bear on present decisions’ (Walsh & Ungure, 1996).
